INDEX

Page

Acid production by *Rhizopus tritici* in Decaying Sweet Potatoes: H. A. Edson..... 9-12
Acidity of Corn and its Relation to vegetative Vigor: Annie May Hurd..... 457-469
Acids, formation—
by *Botrytis cinerea*..... 155-164
by *Rhizopus* spp..... 155-164
Ackert, J. E., Herrick, C. A., and Danheim, Bertha L.: Growing Experimental Chickens in Confinement..... 451-456
Aeration, soil, importance to plant growth, and indication method..... 133-140
Aleurodicus manni, description..... 253-254
Almond, Indian, infestation with fruit fly, Hawaii, and effect of parasite..... 2-4
Alsberg, Carl L., and Schwartze, Erich W.: Quantitative Variation of Gossypol and Its Relation to the Oil Content of Cottonseed..... 285-295
Animals—
feeding, value of palm kernel and palm-kernel meal..... 165-169
heat production, relation to surface measurement..... 419-421
measurement of surface area..... 419-430
Aphids, transmission of potato diseases.... 50-51, 75, 84, 90, 91, 113
Apple-blotch cankers, origin and control... 403-418
Apples—
infection with coconut budrot..... 270
leaf scar canker infection..... 407
petiole lesions, relation to cankers, and control..... 405-407, 411
spraying for blotch infection of leaf and twig..... 409-412
susceptibility of varieties to blotch canker..... 412-413
twig infection with blotch disease, relation to cankers..... 403-408
Arizona, cotton, growth of fruiting parts under irrigation in dry region..... 195, 196, 197, 198, 199-201
Arkansas, wheat disease in..... 351-353
Bacillus trifolii, cause of Italian clover disease..... 472
Bacteria, crowngall—
movement and growth in plants..... 123-131
nature, and location in affected tissue... 125-131
Bacterial Leafspot of Clovers: L. R. Jones, Maude M. Williamson, F. A. Woll, and Lucia McCulloch..... 471-490
Bacterial Spot of Lima Beans: W. B. Tisdale and Maude M. Williamson..... 141-154
Bacterial spot of clover..... 471-490
Bacterium—
glycineum, comparison with *Bacterium trifoliorum*..... 479, 481, 483
phaseoli, cause of bacterial blight of beans. 141-142
sojae, comparison with *Bacterium trifoliorum* 479, 481, 483
trifoliorum—
cause of clover bacterial leafspot, cultural studies..... 475-489
technical description..... 487
tumefaciens..... 119-132
viridifaciens, isolation, morphology, temperature relations, etc..... 144-150
Baker, A. C.: An Undescribed Orange Pest from Honduras..... 253-254
Ballard, W. W., Martin, R. D., and Simpson, D. M.: Growth of Fruiting Parts in Cotton Plants..... 195-208
Barley, inoculation with wheat stripe rust, results..... 367, 368, 369
Beans—
infection with *Corticium vagum*, temperature studies and results..... 438-442
Lima—
bacterial spot of..... 141-154
inoculation with bacterial spot, results 150-151

Page

Bibliography—
acidity relation to plant growth..... 468-469
apple-blotch disease..... 417-418
grain rusts..... 400-401
plant metabolism and climate relations.... 28-30
Blackberry—
infection with orange rust..... 210-212, 219-240
orange rust, new type..... 491-494
stomata development and distribution, relation to orange rusts..... 495-500
varieties resistant to orange rust..... 237-238
Blackrot, cacao, description and cause..... 267-284
Blight, bacterial, on Lima beans, cause, description, comparison with bacterial spot... 141-149, 143
Blotch, apple, canker, origin and control... 403-418
Bolls, cotton, growth in different varieties. 203-206
Bone meal, efficiency in Porto Rican soils... 174-183-187
Bordeaux mixture, spraying apple trees for blotch canker, results..... 410-412
Botrytis cinerea, hydrogen-ion changes caused by..... 160-164
Breeding, dwarf forms of corn, inheritance studies..... 297-322
Buckwheat, growing in soil cultures and sand cultures, within climatic chambers..... 17-27
Budrot, coconut—
description and cause..... 267-284
infection experiments with various plants. 268-271
Cacao—
blackrot, cause, study..... 267-284
canker, cause, study..... 267-284
infection with coconut budrot..... 270
losses from blackrot and canker, in the Philippines..... 267-283
Cacoma nitens..... 491-494
Canker—
apple blotch—
eradication in young orchards..... 414-416
location and date of appearance.... 404-405, 413
longevity of fungus..... 408
nursery stock infection..... 414
origin and control..... 405-418
cacao, description and cause..... 267-284
carbonic acid, use in determination of sulphur compounds in dry lime-sulphur.. 325-327, 330-332, 334, 335
Carrero, J. O., and Gile, P. L.: Efficiencies of Phosphatic Fertilizers as Affected by Liming and by the Length of Time the Phosphates Remained in Porto Rican Soils..... 171-194
Cattle, measurement of surface area..... 419-430
Cereals, inoculation with wheat stripe rust, results..... 367-371
Chambers, climatic, purpose, construction, and operation..... 17-20
Chickens—
feeding in confinement, experiments..... 452-454
growing in confinement, experiments.... 451-456
Climate, effect on properties of the soil, experiments..... 13-30
Clover—
bacterial leafspot of..... 471-490
red, growing in soil cultures in greenhouses, experiments..... 15-17
Cobb, N. A.: The Pharynx and Alimentary Canal of the Hookworm Larva *Necator americanus*..... 359-362
Coconut, budrot—
cause, study..... 267-284
losses from, in the Philippines..... 267, 283
Color solution, standard, preparation in oxygen-testing method..... 136
Comparative Study of *Phytophthora faberi* on Coconut and Cacao in the Philippine Islands: Otto A. Reinking..... 267-284
Corn—
acidity, relation to vegetative vigor..... 457-469
dwarf forms, breeding, inheritance studies. 297-322
leaf and stalk juices, comparative acidities 462-464

Corn—Continued. Page
stature, changes in dwarfing 299-311
tops, acidity, relation to vegetative vigor .. 458-462, 466
types with respect to height, inheritance studies 297, 299-311
Correlation of Foliage Degeneration Diseases of the Irish Potato with Variations of the Tuber and the Sprout: Alfred H. Gilbert. 255-256
Corticium vagum—
growth in pure culture, temperature studies 442-447
pathogenicity on pea and bean, relation to soil temperature 431-450
Cotton—
fruiting parts, growth 195-208
varieties, composition, gossypol determinations, results 291
Cottonseed—
composition, gossypol determinations, results 290-294
examination for gossypol content, methods 287-289
oil content, relation to quantitative variation of gossypol 285-295
Crowngall—
bacteria, movement and growth in plants. 123-131
organism, relations to its host tissue 119-139
Danheim, Bertha L., Herrick, C. A., and Ackert, J. E.: Growing Experimental Chickens in Confinement 451-456
Decay, sweet potato, produced by *Rhizopus* spp. and *Botrylis cinerea* 155-164
Determination of Sulphur Compounds in Dry Lime Sulphur: Carleton Parker Jones 323-326
Determination of the Surface Area of Cattle and Swine: Albert G. Hogan and Charles I. Skouby 419-433
Dewberry, infection with orange rust, studies. 212, 214, 226, 237
Diachasma spp., parasites of fruit fly, introduction and records 1, 4-7
Diseases—
degeneration, definition 43-45
potato, perpetuation and spread methods. 96-102
Dodge, B. O.:
A New Type of Orange Rust on Blackberry 491-494
Effect of the Orange Rusts of Rubus on the Development and Distribution of Stomata 495-500
Systemic Infection of Rubus with the Orange Rusts 209-242
Dwarf forms in corn, comparisons and breeding experiments 297-320
Dwarfing in maize, inheritance of 297-322
Ears, corn, changes in dwarfing 313-316
Edson, H. A.: Acid Production by *Rhizopus trilici* in Decaying Sweet Potatoes 9-12
Effect of the Orange Rusts of Rubus on the Development and Distribution of Stomata: B. O. Dodge 495-500
Efficiencies of Phosphatic Fertilizers as Affected by Liming and by the Length of Time the Phosphates Remained in Porto Rican Soils: P. L. Gile and J. O. Carrero. 171-194
Einkorn, susceptibility to wheat stripe rust infection, experiments 380, 387, 396
Elaeis guineensis (palm oil) 165-169
Elliott, J. A., and Rosen, H. R.: Pathogenicity of *Ophiobolus cariceli* in Its Relationship to Weakened Plants 351-358
Emmer, susceptibility to wheat stripe rust infection, experiments 379, 386, 395
Feed, value of palm kernels and palm-kernel meal 165-169
Feeding chicks in confinement experiments 452-454
Fermentation of sweet potatoes by *Rhizopus trilici*, decomposition products 9-12
Fertilizer—
effect on "take-all" disease of wheat 354-356
phosphatic, efficiencies in Porto Rican soils 171-194
Finks, A. J., and Jones, D. Breese: Growth-Promoting Value of the Proteins of the Palm Kernel, and the Vitamin Content of Palm-Kernel Meal 165-169
Floats, efficiency in Porto Rican soils .. 174-182, 187
Fly, fruit, Mediterranean, work and parasitism in Hawaii during 1919 and 1920 1-7
Folsom, Donald, and Schultz, E. S.: Transmission, Variation, and Control of Certain Degeneration Diseases of Irish Potatoes ... 43-118
Fruits, Hawaii, infestation by Mediterranean fruit fly in 1919, 1920 3-5
Fungus, apple-blotch canker, longevity 408
Galls, formation in plants by crowngall inoculation 123-128
Gardner, Max W.: Origin and Control of Apple-Blotch Cankers 403-418
Germination, potato, tests for rest periods ... 256
Gilbert, Alfred H.: Correlation of Foliage Degeneration Diseases of the Irish Potato with Variations of the Tuber and Sprout. 255-266
Gile, P. L., and Carrero, J. O.: Efficiencies of Phosphatic Fertilizers as Affected by Liming and by the Length of Time the Phosphates Remained in Porto Rican Soils ... 171-194
Gossypol—
acetate of cottonseed, optical crystallographic properties 290
cottonseed—
relation to oil content 285-295
quantity variations due to place of growth and season 291-294
Grasses—
inoculation with wheat stripe rust, results 368-371
wild, susceptibility to *Ophiobolus cariceli* 353, 357
Growing Experimental Chickens in Confinement: C. A. Herrick, J. E. Ackert, and Bertha L. Danheim 451-456
Growth of Fruiting Parts in Cotton Plants: R. D. Martin, W. W. Ballard, and D. M. Simpson 195-213
Guava, infestation with fruit fly, Hawaii, and effect of parasites 3-4
Gymnoconia—
infection of blackberry and raspberry, experiments 495-500
infection of Rubus 209-242
two life cycles, discussion 492-494
Harter, L. L., and J. L. Weimer: Hydrogen-ion changes induced by species of *Rhizopus* and by *Botrylis cinerea* 155-164
Hawaii, Mediterranean fruit fly in, 1919, 1920 1-7
Heat production by animals, relation to body weight and surface area 419-421
Height-weight formula for cattle and swine 422-429
Herrick, C. A., Ackert, J. E., and Danheim, Bertha L.: Growing Experimental Chickens in Confinement 451-456
Hessian fly parasite—
Platygaster hiemalis, development method 337-350
Platygaster vernalis 31-42
Hill, Charles C.: *Platygaster vernalis* Myers, an Important Parasite of the Hessian Fly. 31-42
Hill, C. C., and R. W. Leiby: The Twinning and Monembryonic Development of *Platygaster hiemalis*, a Parasite of the Hessian Fly 337-350
Hogan, Albert G., and Skouby, Charles I.: Determination of the Surface Area of Cattle and Swine 419-430
Hogs, measurement of surface area 419-430
Honduras orange pest, *Aleurodicus mannii*. 253-254
Hookworm larva—
penetration into human skin 360
pharynx and alimentary canal 359-362
Humidifiers, use in climatic chambers of greenhouses, description 18-19
Hungerford, Charles W., and Owens, C. E.: Specialized Varieties of *Puccinia glumarum*, and Hosts for variety *tritici* 363-402
Hurd, Annie May: Acidity of Corn and Its Relation to Vegetative Vigor 457-469
Hutchins, Lee M., and Livingston, B. E.: Oxygen-Supplying Power of the Soil as Indicated by Color Changes in Alkaline Pyrogallol Solution 133-140
Hydrochloric acid, use in sulphur determinations 327-330, 333
Hydrogen-Ion Changes Induced by Species of *Rhizopus* and by *Botrylis cinerea*: J. L. Weimer and L. L. Harter 155-164

Plants—
metabolism, temperature effects ... 13-30
stalk juices, comparison with leaf juices in acidity ... 462-464
Platygaster—
hiemalis—development of ... 337-350
life history and development methods ... 337-350
twinning and monembryonic development ... 337-350
vernalis, importance, distribution, life history, and mortality ... 31-42
Platygaster vernalis Myers, an Important Parasite of the Hessian Fly: Charles C. Hill ... 31-42
Porto Rico, fertilizer studies, efficiency of phosphates in soils ... 171-194
Potato—
degeneration diseases, transmission and control ... 46-111

Potato—Continued. Page
foliage diseases, relation to variations of the tuber and sprout 255–266
infection with *Corticium vagum* 431, 437, 443
variations of tuber and sprout, relation to foliage diseases 255–266
Potatoes—
disease perpetuation and spread 96–102
disease transmission—
between varieties of potato 63–85
to other species 85–910
Green Mountain, transmission of diseases. 46–63
mosaic diseases, transmission experiments. 46–53, 62, 63–92
rest periods before germination, tests 256
sprout variations relation to foliage degeneration diseases 255–266
sprouting retardation by foliage diseases. 256–257
transmission, variation, and control of diseases 43–118
tuber variations, relation to foliage degeneration diseases 255–266
Puccinia—
dispersa 243–252
glumarum—
specialized varieties, and hosts for var. *tritici* 363–402
tritici 371–399
pecciana, raspberry infection, experiments 499
Pyrogallol, alkaline solution, indication of oxygen-supplying power of soil 133–140
color changes in testing oxygen-supplying power of soils 133–140
Pythium palmivorum, same as *Phytophthora palmivorum* 282–283
Quantitative Variation of Gossypol and Its Relation to the Oil Content of Cottonseed: Erich W. Schwartze and Carl L. Alsberg. 285–296
Raspberry—
infection with orange rust, studies 212–219, 235–239
mosaic, inoculation into potatoes, results ... 92
stomata, development and distribution, relation to orange rusts 495–500
Reinking, Otto August: Comparative study of *Phytophthora faberi* on Coconut and Cacao in the Philippine Islands 267–284
Resistence in Rye to Leaf Rust, *puccinia dispersa* Erikss: E. B. Mains and C. E. Leighty 243–252
Rhizopus—
hydrogen-ion changes caused by spp 155–160
tritici—
acid production in decaying sweet potatoes 9–12
activity, relation to light 157–160

Slag, basic, efficiency in Porto Rican soils. 174–183, 187
Soil—
cultures, buckwheat-growing experiments. 20–24
effect of climate on, studies 13–30
efficiency of phosphatic fertilizers in Porto Rico 171–194
oxygen-supplying power, indication method 133–140
treatment for control of wheat "take-all" disease, experiments 354–356
Soil Temperature as a Factor Affecting the Pathogenicity of Corticium vagum on the Pea and the Bean: B. L. Richards 431
Some Relations of the Crowngall Organism to Its Host Tissue: A. J. Riker 119–132
South Carolina, cotton, growth of fruiting parts under humid conditions 195, 196, 197, 198, 205–206
Specialized Varieties of *Puccinia glumarum* and Hosts for var. *tritici*: Charles W. Hungerford and C. E. Owens 363–402
Spelt, susceptibility to wheat stripe rust infection, experiments 380, 387, 396
Spindling sprout, potato, relation to leaf-roll 260–262
Spindling tuber, potato disease, description and transmission 55–60, 61
Spot, bacterial of Lima bean, cause and description 141–154
Sprays, apple-blotch control on leaf and twig 409–412
Sprouts, potato, apical dominance, relation to foliage condition 263–265
Squares, cotton, growth methods in different varieties 198–202
Stomata, Rubus, development and distribution, relation to orange rusts 495–500
Streak, potato disease, description and transmission experiments 53–54, 61
Stripe rust, wheat, varietal susceptibility nursery and greenhouse studies 371–399
Sulphur compounds in dry lime-sulphur, determinations 323–336
Superphosphates, double, efficiency in Porto Rican soils 172–183, 187
Sweet potatoes—
decay produced by *Rhizopus* spp. and *Botrytis cinerea* 155–164
decaying, acid production by *Rhizopus tritici* 9–12
Systemic Infection of Rubus with the Orange Rusts: B. O. Dodge 209–242
Take-all wheat disease, relation to weakened plants, and control 351–358
Temperature Effects in Plant Metabolism: W. R. Tottingham 13–30
Temperature, soil, relation to pathogenicity of *Corticium vagum* 431–450
Tetrastichus giffardianus, parasite of fruit fly, in Hawaii 1, 4–7
Texas cotton, growth of fruiting parts under drought conditions 195, 196, 197, 198, 201–204
Thiosulphate, determination, by carbonic-acid method 325–327, 330–332
Tisdale, W. B., and Williamson, Maude M.: Bacterial Spot of Lima Bean 141–154
Tobacco, inoculation with potato mosaic 86–89
Tomato—
crowngall infection, studies and experiments 119–132
infection with coconut budrot 270

Tomato—Continued. Page
inoculations with potato mosaic..... 88-89
Tottingham, W. R.: Temperature Effects in Plant Metabolism..... 13-30
Transmission, Variation, and Control of Certain Degeneration Diseases of Irish Potatoes: E. S. Schultz and Donald Folsom... 43-118
Twinning and Monembryonic Development of *Platygaster niemalis*, a Parasite of the Hessian Fly, The: R. W. Leiby and C. C. Hill..... 337-350
Undescribed Orange Pest from Honduras, An: A. C. Baker..... 253-259
Vermont, potato foliage diseases, conditions 257-263
Virginia, clover bacterial leafspot, characteristics..... 486, 487
Vitamins in palm-kernel meal, growth-promoting value..... 165-169
Weimer, J. L. and Harter, L. L.: Hydrogen-Ion Changes Induced by Species of Rhizopus and by *Botrytis cinerea*..... 155-164
Wheat—
fertilizers, experiments in control of *Ophiobolus cariceti*..... 354-356
Wheat—Continued. Page
stripe rust, susceptibility of wheat varieties to experiments..... 371-399
take-all disease—
relation to weakened plants, and control 351-358
soil treatment for control of..... 354-356
Willard, H. F.: Work and Parasitism of the Mediterranean Fruit Fly in Hawaii during 1919 and 1920..... 1-7
Williamson, M. M., Jones, L. R., Wolf, F. A., McCulloch, Lucia: Bacterial Leafspot of Clovers..... 471-490
Williamson, M. M., and Tisdale, W. B.: Bacterial Spot of Lima Bean..... 141-154
Wisconsin, clover bacterial leafspot, characteristics..... 486-487
Wolf, F. A., Jones, L. R., Williamson, M. M., and McCulloch, Lucia: Bacterial Leafspot of Clovers..... 471-490
Work and Parasitism of the Mediterranean Fruit Fly in Hawaii during 1919 and 1920: H. F. Willard..... 1-8
Wounds, plant, relation to crowngall infection..... 120-123
